### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Benjamin E. Urcia on January 26, 2004.

2. The specification has been amended as follows:

On page 6, line 20 of the specification, insert --output by the laser communication system 10-- after the word "signals" and before the word "after".

3. Claims 1, 2, and 4 have been amended as follows:

1. A system for handling laser-communication multiplexing in chaotic secure communications, comprising

a transmitter containing a self-pulsating laser diode, wherein the self-pulsating laser diode is driven by an externally applied ac current containing messages to be multiplexed;

a receiver containing a self-pulsating laser diode, wherein the self-pulsating laser diode of the receiver is driven by signals output by the ~~transmitter, and wherein~~ transmitter, wherein said receiver includes:

a synchronization device for simplex-coupling the signals output by the transmitter to response signals of the receiver by adjusting an amplitude of the self-pulsating laser diode according to a predetermined coupling coefficient shared by the transmitter and receiver and comparing output signals from the self-pulsating laser diode of the receiver ~~are compared~~ with the signals output by the transmitter to obtain a difference signal including synchronized chaotic time sequences[[],]; and

a low-pass filter, to which the difference signal is applied, said low-pass filter transforming chaotic time sequences of lower fractal dimension into chaotic time sequences of higher fractal dimension to cause a periodicity of the multiplexed messages to emerge by adjusting an appropriate parameter of the low-pass filter, thereby decoding the multiplexed message encoded by the chaotic laser light of the transmitter end.

2. A method for handling laser-communication multiplexing in chaotic secure communications, which comprises the following procedures,
  - a. applying a set of messages to be multiplexed and a corresponding set of ac currents to a laser diode of a transmitter end;
  - b. driving the laser diode of the transmitter end by the ~~said~~ ac current set and adjusting the amplitude and frequency of the said ac current set to produce chaotic laser signals;

Art Unit: 2828

- c. driving a laser diode of a receiver end by the chaotic signals generated from the transmitter end to obtain receiver end chaotic signals, simplex-coupling the receiver end chaotic signals to the transmitter end chaotic signals by supplying a predetermined coupling coefficient to the laser diode of the receiver end, thereby causing and adjusting the receiver end chaotic signals to match the chaotic signals generated from the transmitter end, and comparing the chaotic signals to obtain a difference signal containing chaotic time sequences;
  - d. sending the difference signal to a low-pass filter; and
  - e. adjusting a parameter of the low-pass filter to cause chaotic time sequences of lower fractal dimension to be transferred to chaotic time sequences of higher fractal dimension and the periodicity of the multiplexed messages to emerge, thereby decoding the multiplexed messages encoded by the chaotic laser light of the transmitter end.
4. The method for handling laser-communication multiplexing in chaotic secure communications as described in claim 24, wherein the parameter of the said low-pass filter is in the range 0.13-0.97.

*Allowable Subject Matter*

- 4. Claims 1-4 are allowed.
- 5. The following is an examiner's statement of reasons for allowance:

Art Unit: 2828

The prior art does not teach some of the limitations found in independent claims 1 and 2. Cuomo teaches a system similar to that of the present application. However, Cuomo does not teach a receiver containing a self-pulsating laser diode, and Cuomo also does not teach applying the generated difference signal to a low-pass filter for transforming chaotic time sequences of lower fractal dimension into chaotic time sequences of higher fractal dimension, as is claimed in independent claims 1 and 2. Therefore, independent claims 1 and 2, as well as all dependent claims, are allowable over the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
